Annexure A

Terms of Reference

For Rental Godown for storage of

Medicine, Condom, Blood bags, Kits and any other material

Roof & ceiling: Godown must be located at Bhiwandi. Roof of godown should be RCCOR. Consider the slope of the roof and placement of roof support column, and its impact on height clearance for rack configuration and other warehouse operations. Avoid using non insulated galvanised steel metal sheeting for the roofing because it gets ultra heated. If the above situation is unavoidable, then create as much airflow as possible by using ventilation fans and tiered roof sections.

For optimal use of space and protection from heat, the best choice would be to have a building without an internal ceiling. Insulated roofing panels are highly recommended like with galvanised steel sheeting with a polyurethane insulation, which is available in 40 millimetre (mm)–100 mm widths. For their best performance these should have a reflective powder coated white paint or light grey. This is more efficient than an internal ceiling because it blocks the heat before it can enter any part of the building.

Flooring: In the warehouse planning for a ground floor slab is critical. This floor slab should meet the following criteria :

- Support applied loads without cracking or deforming.
- Have minimum number of exposed joints.
- Have maintenance free joints.
- Be smooth and easy to clean, but not slippery.
- Be strong enough to handle loaded weight of stacker and its movement

Warehouse floors must meet stress and strength requirements, failing which they may fail because of pressure from loaded racks and heavy operating equipment. Following factors must be considered before deciding the floor:

- Floor surface, including surface material, depth of material, sub surface material, etc.
- Door openings, including surface material around loading/unloading dock doors, warehouse exit doors, etc.
- Loading dock and vehicle tailgate heights.
- Building column locations.
- Lift equipment aisle width requirements.
- Loading and floor stacking of material.
- Overall length of rack rows having possible effects on floor surface.

Flooring must be tiled to avoid moisture/rodent, adequate light, ventilation and dust free, with 24 x7 securities.

Area : Godown must be **3000** sq.ft (carpet area). Godown must be located in easily accessible area for all types of vehicles especially heavy vehicles and trucks with sufficient space for loading and unloading.

Drainage: Build the warehouse on a raised foundation to allow rain water to drain away from its main structure. If possible, locate the warehouse on a higher ground that is not prone to flooding or drainage problems.

Insurance, taxes and other charges: Electricity, water bill, maintenance charges shall be borne by godown owner. After receiving of maintenance complaints, complaints should be attended within a week. Godown must be under insurance coverage of Rs. 20,00,000/-. There should be 10 fire extinguisher of 5 K.g.

Contract period: The godown contract period will be initially for one year, and based on performance will be extended for further one year. MSACS may terminate/ cancel the contract by giving one month notice. Godown owner can't keep any other goods except MSACS material.

Landline Telephone, CCTV and Internet connection: Godown owner must provide CCTV, internet connectivity and landline (mobile service is landline service is not available). No extra payment will be made for the same.

Stock Register: Stock register should be maintained computerize system daily at store for recording the In & Out status of material at godown. And all material will be handled by pharmacist.

Walk in Cooler : Godown service provider should be provide walk in cooler.

Pallet stacking: The most basic form of a storage system consists of placing boxes one on top of another in an organized way in a bonded fashion/arrangement. Advantages of this system are that it is low cost, has flexible layout, can be moved and does not call for expensive floor renovations. Disadvantages of pallet stacking are that it can become messy and make poor use of space in case height of the ceiling is more than 4.5 meters.

The product, its weight and dimensions will determine how high the stack can be and should be stacked. Always look at the packaging to see if the manufacturer has labelled the maximum height at which their boxes should be stacked, as well as for any arrow indicating the direction which the boxes should face.
